*Using your own location as a temporary interactive training centre*

## ***Converting objects non-destructively into an exercise facility***

The emergency services perform training courses so that they are prepared for the real thing, so what better place to conduct an exercise than on location in your own region? FireWare can convert almost any object or environment imaginable into an exercise facility, whether it's a vacant building, a nature reserve or a tunnel. Because we believe in the non-destructive staging of scenarios, whatever we convert will not be damaged. And because we have the largest collection of specialised training equipment for hire in Europe, we can take on practically every simulation challenge you might have! We have the gear, the knowledge and the people!

## ***FireWare provides the staging scenario and the imagery, not the course itself***

FireWare specialises in staging! We never interfere with the content of a course. When you contract out the staging tasks in full, training supervisors and instructors have more time and space to focus on their own specialist fields, which means that together we can create the best possible training experience for all participants. Inspirational partnerships are one of our core values!

## ***Preventing object fatigue***

Nothing is worse for a trainee to be presented with an exercise environment that has become completely predictable. The use of a temporary training environment will prevent this phenomenon from occurring. We can also provide realistic staging options in a complex location where specific simulations are required, keeping in mind the interests of all parties concerned.

## ***Appealing to all senses***

Our staging scenarios and simulations appeal to all senses, thanks to the wide array of interactive training equipment that can create a realistic exercise environment for almost every situation imaginable. We are happy to supply all the training equipment required and are also happy to use any equipment available onsite – we can mix and match as required!

Equipment can be operated remotely using tablet computers. Videos of the staging can be watched on the same tablet, giving the instructor an excellent overview without having to disrupt the exercise.

## ***Multidisciplinary***

Aside from single-discipline courses, the FireWare staging team is also used to create complex multidisciplinary exercises. These exercises have their own dynamic with training goals for all branches of the emergency services, which means a lot more is required of a staging, especially when multiple operational levels are involved. FireWare's staging team has wide experience when it comes to staging scenarios for such exercises.

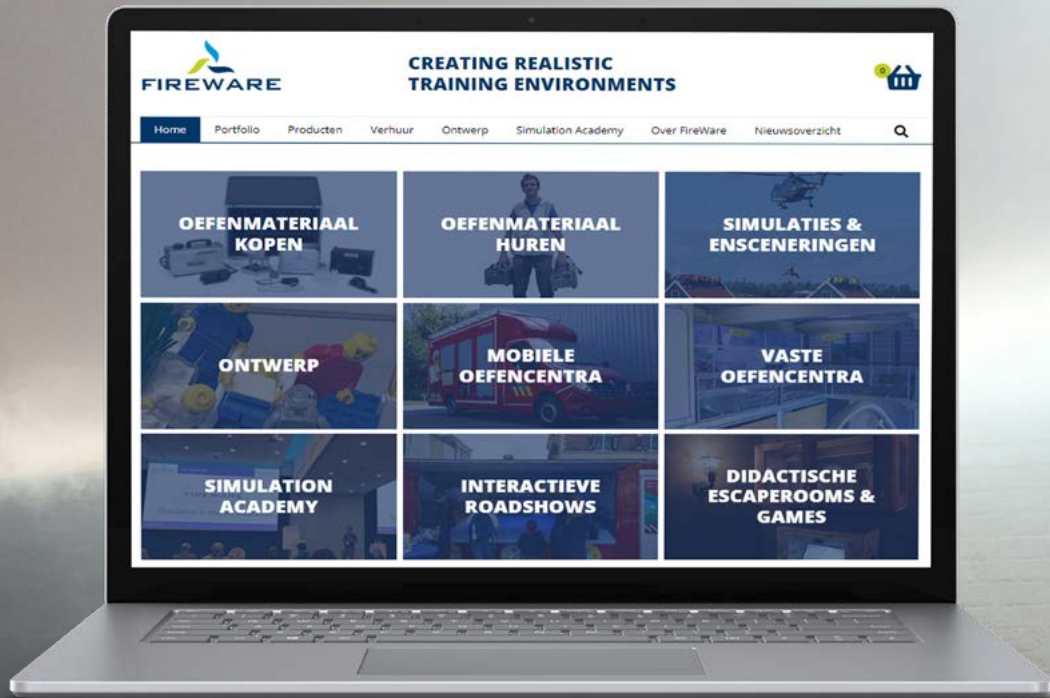

## ***Want to know more?***

Our website contains an extensive portfolio with a selection of the rental projects we have staged. If you would like to explore your options together? Please get in touch with FireWare. We'll always come to your rescue!

- Realistic training equipment -
- Public awareness roadshows -
  - Training facility design -
- On-site incident simulation team -
  - Gamification & interactives -
- Staging & special effect courses -
